

DATA ANALYSIS USING SPSS TRAINING

ASSIGNMENT USING DATASET FROM PARTICIPANTS

1. Select a relevant variable (1 variable) of your choice, generate the frequencies of the variables that you have just created. Briefly interpret the frequency table.
2. Select two (2) variables to run a cross-tabulation, and write a small analysis on the cross-tabulated variables.
3. Generate a pie chart for money spent on domestic animals per year on the original dataset.
4. Generate a histogram using a one (1) relevant variable of your choice and make a brief interpretation of the results.
5. Recode your satisfaction with care of domesticated variable data into three (3) group levels.
6. Run One-Way Analysis of Variance (ANOVA) with multiple comparism. Use the independent variable from 4 and briefly interpret findings.

Put up a report with your names and submit by 27 July 2023 end of day and copy myself and Daman.
